

SELECTED BENEFITS OF THE NEW PROFYLAX

The new version of PROFYLAX has been prepared for over a year and includes hundreds of programming modifications. Below is a description of only a few of them. The main objective was to achieve the following three things:

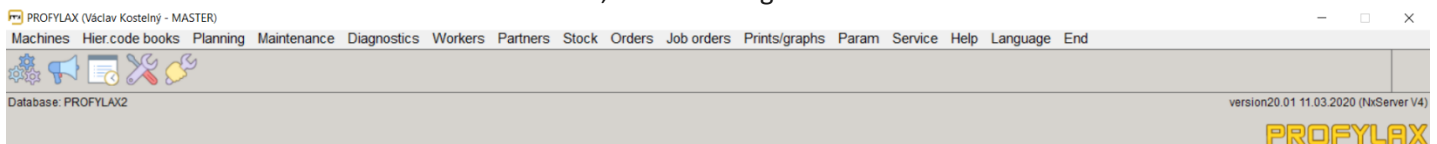

1. Total program acceleration even when using via wifi and work multiple users simultaneously.
2. Adding new user interface settings to adapt to the individual needs of each user.
3. Modification of the internal structure of the program for overall acceleration of work in the program.

- **A MORE USER-FRIENDLY ENVIRONMENT**

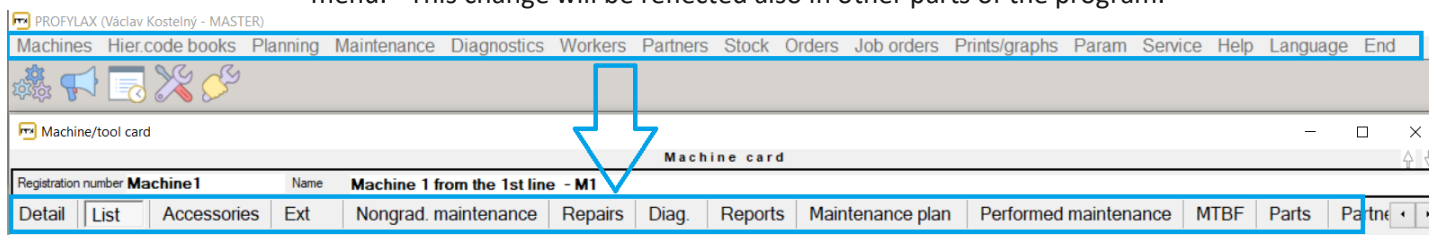

- The icons are larger for better visibility and there are eight icon styles which you can choose.

- **You can also hide icons** so that individual users do not have icons they do not use in the main menu. For example, users who do not work with orders can hide this icon. You can also **change order all icons**. Next example, if a maintenance worker uses only a Machine card, Machine reports, Maintenance / shutdown plan, Personal repairs and Performed maintenance, the icons might look like this:

- By simply turning the mouse wheel, **you can quickly change the font size** in the basic menu. - This change will be reflected also in other parts of the program.

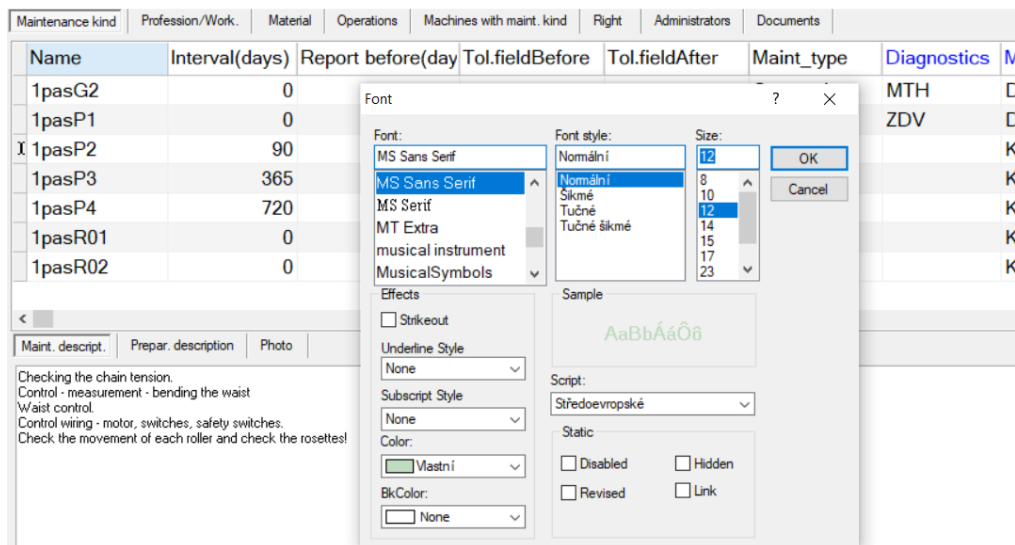

PROFYLAX

- The internal structure of the menu has been adjusted to a uniform and clearer appearance so that the related things are always together, allowing easier and faster orientation and work in the program.

- **SELECTED NEW FEATURES OF THE NEW PROFYLAX**

- The new version of the program contains a lot of programming modifications, which allow much faster user work and the program generally works much faster. **Especially when connected via wifi.**
- **Multitasking** - in the new version of PFX is a possibility to work with multiple tables at the same time.
- **A Possibility to adjust the font in the maintenance description**

 Maintenance kinds

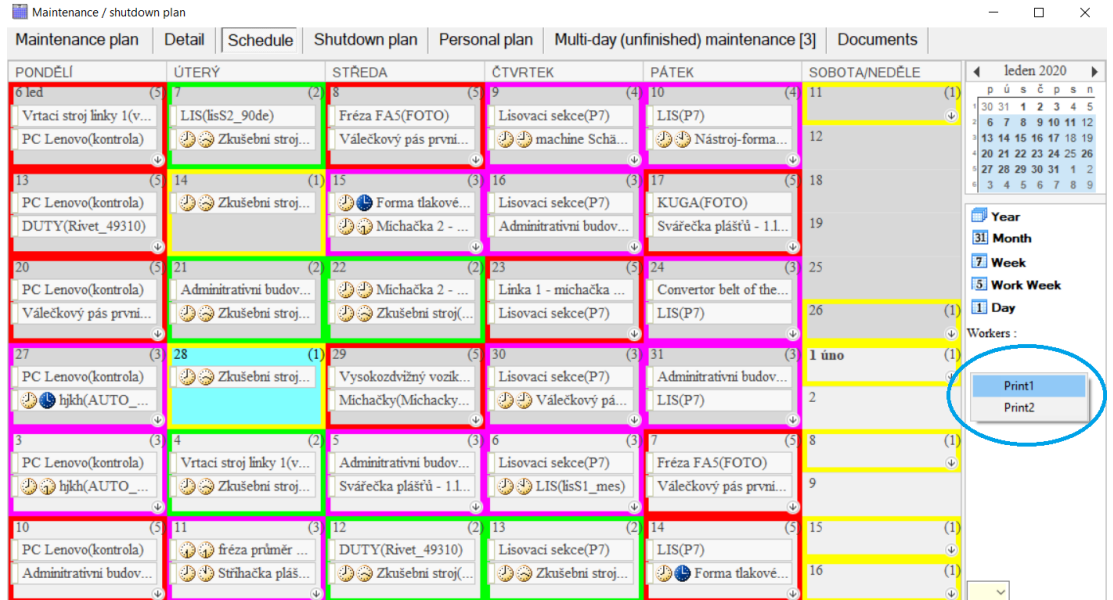

- **Windows notifications**

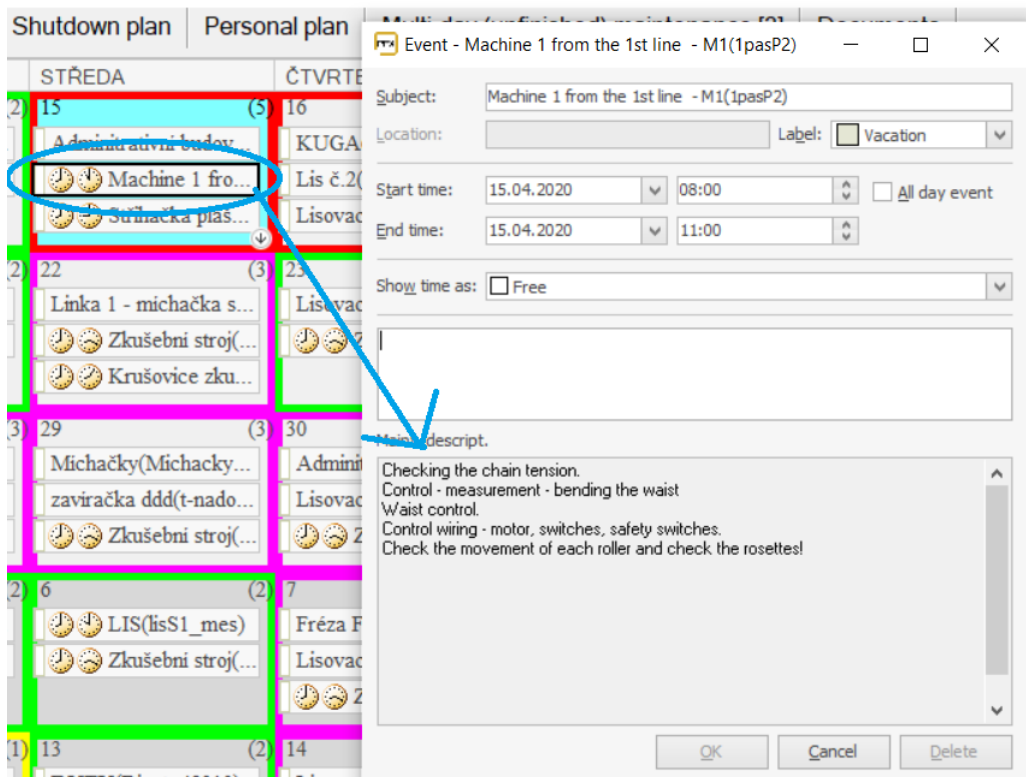

PROFYLAX

- A Possibility to print the plan in the schedule/calendar form.

- Display the maintenance description directly in the calendar. **Simplify the work for the maintenance workers** when they searching for a description of some maintenance.

PROFYLAX

- The overall arrangement of the individual form's structures for **better orientation and acceleration of entries**. When entering reports, there is also the **possibility to enter a responsible person**.

- For a quick overview of the status of machines is added **color resolution**. Machines with **STOP (red)** and **Warning (orange)** flags. There is also a **new option of a mass shutdown of machines according to the selected filter**. At the Documents tab, you can now **simply add directory links**.

- Double-clicking on the selected maintenance in the *Maintenance plan* will immediately cause open the maintenance entry. → Speeding up entering individual maintenance records. There is set the **new layout** of the form, which will **speed up** and **make the overall entry more easily**.

- The function of copying user settings to another has been added. If you set the rights for machines, warehouses + user parameters for one user, these settings can be copied to another user in just a few clicks, or you can create a new user with the same settings.
- There is now also the possibility of assigning rights for creating a new report. For example, users will have access to all machines, but they will be able to create new reports only for the machines of your choice.

PROFYLAX

These are just a few of the innovations, and we're constantly working to improve the program to provide the most comfortable work with the program and to provide other possibilities of planning, management, and business maintenance records.

If you have any questions regarding the delivery/implementation of the new version of PROFYLAX, we will be glad to answer.
